

Vercel Deployment Status Check - Oct 7, 2025

Current Situation

- Website URL: <https://natureswaysoil.com>
- Status: Returns 200 OK but serving cached content
- Cache Age: ~46 hours old (167677 seconds)
- Latest Git Commit: ec2273a - "Fix: Downgrade Next.js to 14.2.15 for React 18 compatibility"

Issues Fixed in Code

1. ☒ Removed broken video section from homepage
2. ☒ Changed "100% Organic" to "Safe & Natural"
3. ☒ Fixed Next.js/React version compatibility (Next 14.2.15 + React 18)
4. ☒ Added .npmrc with legacy-peer-deps flag

Problem

The 404 error you're seeing suggests either:

1. Vercel automatic deployment didn't trigger from the GitHub push
2. The deployment is failing silently
3. There's a routing issue in the build

What You Need to Do

Since I cannot access your Vercel dashboard with the API, you'll need to:

1. **Go to Vercel Dashboard:** <https://vercel.com/dashboard>
2. **Find your project:** "coplit-built" or "natureswaysoil"
3. **Check Deployments tab:**
 - Look for the latest deployment (should show commit "ec2273a")
 - Check if it's building, failed, or succeeded
4. **If no new deployment:** Click "Redeploy" button manually
5. **If deployment failed:** Check the build logs for errors
6. **Clear cache:** After successful deployment, you may need to purge the Vercel cache

Alternative: Manual Redeploy

If automatic deployment isn't working:

- In Vercel dashboard → Your Project → Deployments
- Click the three dots on the latest successful deployment
- Select "Redeploy"
- This will force a fresh build with the new code
