

Deployment Issues Found and Fixed

Date: October 6, 2025

Issues Identified on Live Site (<https://coplit-built-mx6e.vercel.app/>)

✅ **FIXED: Issue #1 - Broken Logo Image**

Problem:

- Logo image at `/logo-with-tagline.png` was returning 400 error
- File was corrupted (only 1 byte in size)
- Caused broken image icon in header navigation

Root Cause:

- The `public/logo-with-tagline.png` file was corrupted during a previous commit
- Valid backup existed in `public/screenshots/logo-with-tagline.png`

Fix Applied:

- Copied valid logo from `public/screenshots/logo-with-tagline.png` to `public/logo-with-tagline.png`
- File size: 1.3MB (valid PNG image, 1024x1024, RGBA)

Verification:

```
file public/logo-with-tagline.png
# Output: PNG image data, 1024 x 1024, 8-bit/color RGBA, non-interlaced
```

⚠️ **REQUIRES VERCEL CONFIG: Issue #2 - Stripe Payment Form Error**

Problem:

- Checkout page shows error: "Payment form unavailable - Stripe couldn't initialize: Stripe publishable key missing"
- Payment form cannot be displayed to customers
- Checkout process is blocked

Root Cause:

- Stripe publishable key is not configured in Vercel environment variables
- Local `.env.local` file contains placeholder values (intentionally, for security)
- The application correctly refuses to use placeholder keys

Required Fix (Must be done in Vercel Dashboard):

Step 1: Get Your Stripe Keys

1. Go to <https://dashboard.stripe.com/>
2. Navigate to Developers → API keys
3. Copy your **Publishable key** (starts with `pk_test_` or `pk_live_`)
4. Copy your **Secret key** (starts with `sk_test_` or `sk_live_`)

Step 2: Configure Vercel Environment Variables

1. Go to <https://vercel.com/dashboard>
2. Select the `coplit-built` project
3. Go to Settings → Environment Variables
4. Add the following variables:

```
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY = pk_test_YOUR_ACTUAL_KEY_HERE  
STRIPE_SECRET_KEY = sk_test_YOUR_ACTUAL_SECRET_KEY_HERE
```

Important Notes:

- Use `pk_test_` and `sk_test_` keys for testing
- Use `pk_live_` and `sk_live_` keys for production
- Make sure both keys are from the same environment (both test OR both live)
- After adding, redeploy the application for changes to take effect

Step 3: Verify the Fix

After redeploying:

1. Visit <https://coplit-built-mx6e.vercel.app/checkout>
2. Add a product to cart and proceed to checkout
3. The Stripe payment form should now load correctly
4. You should see credit card input fields

VERIFIED WORKING: Other Features

Cart Functionality

- Add to cart works correctly
- Cart counter updates properly
- Cart page displays items correctly
- Quantity adjustment works
- Remove from cart works

Checkout Page

- Promo code field is visible and functional
- "SAVE15" promo code hint is displayed
- Shipping options are available (Standard, Expedited, Priority)
- Free shipping notice for orders over \$75
- Contact information form is present
- Shipping address form is complete
- Tax calculation works

-  Subtotal and total calculations are correct

ChatWidget

-  ChatWidget appears on all pages
-  Located at bottom left corner
-  "Ask me anything" prompt is visible

Products Page

-  All products load correctly
-  Product images display properly
-  Product details are accurate
-  Product cards are clickable
-  Product detail pages work

Homepage

-  Hero section loads
-  Content sections display correctly
-  Navigation works
-  Footer is complete

Summary

Fixed in this commit:

1.  Logo image corruption - FIXED

Requires Vercel configuration:

1.  Stripe publishable key - NEEDS VERCEL ENV VAR
2.  Stripe secret key - NEEDS VERCEL ENV VAR

All other functionality:

-  Working correctly

Next Steps

1. **Immediate:** Deploy this fix to restore the logo
2. **Required:** Configure Stripe keys in Vercel (see instructions above)
3. **Verification:** Test checkout flow after Stripe keys are configured

Technical Details

Files Modified

- `public/logo-with-tagline.png` - Replaced corrupted file with valid backup

Files Added

- `DEPLOYMENT_ISSUES_FIXED.md` - This documentation

Code Quality

- No code changes required
 - All existing functionality works as designed
 - Stripe integration code is correct and secure
 - Only missing configuration in deployment environment
-
