

Quick Setup Guide - Nature's Way Soil Improvements

Prerequisites

- Node.js 18+ installed
- npm or yarn package manager
- Supabase account
- Resend account
- OpenAI API key
- Pictory API credentials (optional, for video generation)

Step-by-Step Setup

1. Clone and Install

```
git clone https://github.com/natureswaysoil/coplit-built.git
cd coplit-built
npm install
```

2. Configure Environment Variables

Copy the example environment file:

```
cp .env.example .env.local
```

Edit `.env.local` and add your credentials:

```
# Supabase (Required)
NEXT_PUBLIC_SUPABASE_URL=https://your-project.supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=your_anon_key_here

# OpenAI (Required for chat)
OPENAI_API_KEY=sk-your_openai_key_here

# Resend (Required for emails)
RESEND_API_KEY=re_your_resend_key_here

# Pictory (Optional - only needed for video generation)
PICTORY_API_KEY=your_pictory_key
PICTORY_CLIENT_ID=your_client_id
PICTORY_CLIENT_SECRET=your_client_secret

# Site Configuration
NEXT_PUBLIC_SITE_URL=https://natureswaysoil.com
```

3. Set Up Supabase Database

1. Go to supabase.com (<https://supabase.com>) and create a new project

2. Wait for the project to be ready (2-3 minutes)
3. Go to SQL Editor in your Supabase dashboard
4. Copy the contents of `supabase/migrations/001_initial_schema.sql`
5. Paste and run the SQL in the editor
6. Verify tables were created in the Table Editor

4. Configure Resend

1. Sign up at resend.com (<https://resend.com>)
2. Add and verify your domain:
 - Go to Domains → Add Domain
 - Add DNS records to your domain provider
 - Wait for verification (can take up to 48 hours)
3. Create an API key:
 - Go to API Keys → Create API Key
 - Copy the key to your `.env.local`

5. Set Up OpenAI

1. Go to platform.openai.com (<https://platform.openai.com>)
2. Create an API key in the API Keys section
3. Add billing information (required for API access)
4. Copy the key to your `.env.local`

6. Run Development Server

```
npm run dev
```

Visit <http://localhost:3000> to see your site!

7. Test Features

Test Chat Widget

1. Click the chat icon in the bottom right
2. Ask: "What's the best fertilizer for tomatoes?"
3. Verify you get an intelligent response

Test Email Capture

1. Scroll to the email capture section
2. Enter a test email
3. Check your Supabase dashboard for the new record
4. Check your email for the welcome message

Test Product Views

1. Visit any product page
2. Check Supabase `product_views` table for the new record

8. Deploy to Production

Option A: Vercel (Recommended)

```
# Install Vercel CLI
npm i -g vercel

# Deploy
vercel

# Add environment variables in Vercel dashboard
# Settings → Environment Variables
```

Option B: Other Platforms

Build the production version:

```
npm run build
npm start
```

Deploy the `.next` folder and `public` folder to your hosting provider.

Verification Checklist

- [] Homepage loads with hero video section
- [] Chat widget appears and responds
- [] Email capture form works
- [] Product pages show inventory tracker
- [] Social proof notifications appear
- [] Personalized recommendations load
- [] All environment variables are set
- [] Supabase tables are created
- [] Resend domain is verified
- [] OpenAI API is working

Common Issues

Chat not working

Problem: Chat widget doesn't respond

Solution:

- Check OpenAI API key is valid
- Verify you have billing set up on OpenAI
- Check browser console for errors

Emails not sending

Problem: Welcome emails not arriving

Solution:

- Verify Resend domain is verified (check DNS records)
- Check Resend dashboard for delivery logs
- Make sure API key has send permissions

Database errors

Problem: “relation does not exist” errors

Solution:

- Run the migration SQL again in Supabase
- Check that all tables were created
- Verify RLS policies are enabled

Build errors

Problem: TypeScript or build errors

Solution:

```
# Clear cache and reinstall
rm -rf .next node_modules
npm install
npm run build
```

Next Steps

1. Generate Videos (Optional):

```
bash
python scripts/generate_all_videos.py
```

2. Customize Content:

- Edit hero video script in `scripts/hero_video_script.txt`
- Update product descriptions in `data/products.json`
- Modify email templates in `lib/resend_client.ts`

3. Configure Analytics:

- Add Google Analytics
- Set up conversion tracking
- Monitor Supabase metrics

4. Test Email Flows:

- Sign up with test email
- Add items to cart and abandon
- Complete a test purchase

5. Optimize Performance:

- Enable CDN for images
- Set up caching headers
- Monitor Core Web Vitals

Support

Need help? Check:

- Full documentation: `docs/IMPROVEMENTS.md`
- GitHub Issues: <https://github.com/natureswaysoil/coplit-built/issues>
- Email: dev@natureswaysoil.com

Security Notes

⚠ Important Security Reminders:

- Never commit `.env.local` to git
- Use environment variables for all secrets
- Enable RLS on all Supabase tables
- Rotate API keys regularly
- Monitor API usage for anomalies

Cost Estimates

Monthly costs for typical usage (1000 visitors/month):

- **Supabase:** Free tier (up to 500MB database)
- **Resend:** Free tier (100 emails/day)
- **OpenAI:** ~\$10-20 (depends on chat usage)
- **Pictory:** ~\$29/month (if generating videos)
- **Vercel:** Free tier (hobby projects)

Total: \$10-50/month depending on usage

Performance Targets

- **Lighthouse Score:** 90+ on all metrics
- **First Contentful Paint:** < 1.5s
- **Time to Interactive:** < 3.5s
- **Chat Response Time:** < 2s
- **Email Delivery:** < 30s

Ready to launch! 🚀
