

Setup Notes - Emoji Removal & Promo Code Integration

Changes Made

1. Emoji Removal ✓

All emojis have been removed from the following files:

Modified Files:

- **components/OptimizedCTA.tsx**
 - Removed: 🕒 from “Limited Time: Free Shipping” badge
 - Changed to: “Limited Time: Free Shipping on Orders Over \$50”
- **components/AdvancedEmailCapture.tsx**
 - Removed: 📺 from incentive display
 - Changed to: “Special Offer: {incentive}”
- **pages/index.tsx**
 - Removed: 🚀 from “Proven Results” heading
 - Changed to: “Proven Results”
- **pages/checkout.tsx**
 - Removed: 📦 from “Free Shipping!” message
 - Removed: 💡 from shipping tip
 - Changed to plain text versions

All emojis have been replaced with professional text alternatives while maintaining the same messaging and impact.

2. Promo Code Integration ✓

Frontend Changes (pages/checkout.tsx):

New State Variables:

- `promoCode` : Stores the entered promo code
- `promoApplied` : Tracks if promo is successfully applied
- `promoError` : Stores validation error messages
- `validatingPromo` : Loading state during validation

New UI Section:

- Added “Have a Promo Code?” section in checkout
- Input field for entering promo code (auto-uppercase)
- “Apply” button with validation
- Success message with green checkmark when applied
- Error message display for invalid codes
- “Remove” button to clear applied promo
- Helpful hint: “Try code: SAVE15 for 15% off your order!”

Integration with Payment Flow:

- Promo code is sent to payment intent API when applied
- Payment intent automatically refreshes when promo is applied/removed
- Discount is calculated server-side and displayed in order summary

Backend Integration:**Existing API Endpoints Used:**

- `/api/promo/validate` - Validates promo code with Stripe
- `/api/create-payment-intent-with-tax` - Already supports promo codes

Payment Intent Flow:

1. Frontend validates promo code via `/api/promo/validate`
2. If valid, sets `promoApplied` to true
3. Sends promo code to payment intent API
4. Backend fetches promotion code from Stripe
5. Applies discount (15% off for SAVE15)
6. Returns updated breakdown with discount amount
7. Frontend displays discount in order summary

Stripe Setup:**Created Files:**

- `scripts/create-save15-promo.js` - Automated setup script
- `PROMO_CODE_SETUP.md` - Complete documentation

Promo Code Details:

- **Code:** SAVE15
- **Discount:** 15% off entire order
- **Type:** Percentage discount
- **Duration:** Forever (no expiration)
- **Status:** Active

To Activate:

1. Ensure valid Stripe API keys in `.env.local`
2. Run: `node scripts/create-save15-promo.js`
3. Script creates both coupon and promotion code in Stripe
4. Customers can immediately use "SAVE15" at checkout

Testing Checklist

Emoji Removal Testing:

- ☒ [x] Verify no emojis in OptimizedCTA component
- ☒ [x] Verify no emojis in AdvancedEmailCapture component
- ☒ [x] Verify no emojis in index.tsx
- ☒ [x] Verify no emojis in checkout.tsx
- ☒ [x] Check that text alternatives are professional and clear

Promo Code Testing:

- ☐ [] Run `node scripts/create-save15-promo.js` with valid Stripe keys
- ☐ [] Add items to cart and go to checkout
- ☐ [] Enter "SAVE15" in promo code field

- [] Click “Apply” and verify success message
- [] Verify discount appears in order summary (15% off)
- [] Verify total is correctly reduced
- [] Test “Remove” button to clear promo
- [] Test invalid code (should show error)
- [] Complete a test purchase with promo applied
- [] Verify discount is recorded in Stripe payment intent

Next Steps

1. Update Stripe Keys (Required before promo code works):

- Add real Stripe secret key to `.env.local`
- Format: `STRIPE_SECRET_KEY=sk_test_...` or `sk_live_...`

2. Create Promo Code in Stripe:

```
bash
node scripts/create-save15-promo.js
```

3. Test the Integration:

- Test in development with Stripe test mode
- Use test card: 4242 4242 4242 4242
- Verify discount is applied correctly

4. Deploy to Production:

- Ensure production Stripe keys are set
- Run promo creation script in production
- Test with real payment (small amount)

5. Monitor Usage:

- Check Stripe Dashboard for promo code redemptions
- Monitor order database for `promo_code` usage
- Track total discount amounts

Files Modified

```
components/
  AdvancedEmailCapture.tsx    (emoji removal)
  OptimizedCTA.tsx           (emoji removal)

pages/
  index.tsx                  (emoji removal)
  checkout.tsx               (emoji removal + promo code UI)

scripts/
  create-save15-promo.js      (new - promo setup script)

Documentation:
  PROMO_CODE_SETUP.md         (new - complete guide)
  SETUP_NOTES.md              (new - this file)
```

Important Notes

- **Stripe Keys:** The `.env.local` file currently has placeholder keys. Real keys needed for promo code to work.
- **Server-Side Validation:** All promo code validation happens server-side for security.
- **Discount Calculation:** Stripe handles the discount calculation to ensure accuracy.
- **Order Tracking:** Promo codes are stored in order metadata for reporting.
- **No Database Changes:** Uses Stripe's built-in promotion code system (no Supabase changes needed).

Support

For questions or issues:

- Review `PROMO_CODE_SETUP.md` for detailed documentation
- Check Stripe Dashboard for promotion code status
- Review browser console for frontend errors
- Check server logs for API errors
